Agile Project Proposal

Project Overview

The goal is to build an all-in-one platform where organizers can create events and users can book tickets. The system will handle everything from the first event request to the final ticket refund, ensuring a smooth process for both admins and attendees.

Feature Listing

- Event Lifecycle

- **Creation:** Organizers can submit new event details.
- **Approval:** Admins review and approval
- **Booking:** Users can browse and purchase tickets.
- **Cancellation:** Support for stopping events and processing mass refunds.

- Moderation & Admin Control

- **Vetting:** Admins can deny event requests that don't meet guidelines.
- **Dashboard:** A central hub to see all pending approvals and active events.
- **User Management:** Ability to manage attendee lists and organizer profiles.

- Automated Notifications

- **Booking Receipts:** Instant email/SMS confirmation after purchase.
- **Waitlist Alerts:** Notifying users when a spot opens up.
- **Updates:** Real-time alerts for time changes or event cancellations.

- Payments & Money

- **Secure Checkout:** Integrated payment system for ticket sales.
- **Refund Management:** Admin tools to send money back if an event is canceled or a user withdraws.
- **Transaction Logs:** Keeping track of all successful and failed payments.

Implementation Plan (Agile Approach)

- **Phase 1:** Core setup (Event creation and Admin approval).
- **Phase 2:** Booking and Data consistency.
- **Phase 3:** Waiting list and Notification system.
- **Phase 4:** Payment Integration.
- **Phase 5:** Testing, bug fixing, and final launch.
