Agile Project Flow Analysis

1. Discovery & Browsing

Goal: Allow users to find events and view details.

- **Frontend:** Display "Top Events" and a "View All" button.
 - **Search/Filter:** Advanced filtering options on the "All Events" page.
 - **Event Details:** Page showing title, description, and "Relevant Events" suggestions.
- **Backend:** Query database for featured/top-rated events.
 - Filter logic (date, category, location).
 - Recommendation engine for "Relevant Events."

2. Event Booking

Goal: A secure way for authenticated users to reserve spots.

- **Frontend:** Booking form for details and payment integration.
 - Waiting list prompt if slots are full (0 remaining).
 - Success UI showing ticket details and a QR code.
- **Backend:**
 - **Auth Check:** Verify user session before booking.
 - **Transaction:** Process payments and update slot counts.
 - **Automation:** Trigger confirmation emails with QR code generation.
 - **Queue Management:** Add users to a waiting list if capacity is reached.

3. Event Creation (Organizer)

Goal: Enable users to submit new events for review.

- **Frontend:** "Create Event" form for titles, media, and logistics.
 - Payment portal for refundable application fees.
- **Backend:** Store event as "Pending" status.
 - Escrow-style handling of refundable fees.
 - Notification system to alert Admins of new requests.

4. Management & Administration

Goal: Tools for Organizers to track events and Admins to moderate the platform.

Event Organizer

- **Frontend:** Dashboard with a "Toggle" to open/close registrations.
- **Backend:** Data visualization for simple analytics (ticket sales, views).

Super Admin

- **Frontend:** Queue for monitoring, approving, or rejecting event requests.
- **Backend:** Permissions logic to ensure only Admins can change "Pending" statuses to "Active."
